

Clean air, just for you.

Numa delivers clean, fresh air directly. Inhale more clean air, less virus particles.

Numa reduces inhaled contaminants for seated users by 28% per third-party testing.¹

Numa is more effective than portable air filters and is completely quiet.²

Numa also improves air quality in walkways by driving more clean, fresh air lower in the space.

NVMA

1. Third party testing was done with a Numa unit outputting 30 CFM and mounted at height 8'9". Seated height was 43" above the floor.
2. Room air filter placed on floor in corner of room reduces contaminant count by 20%. Guo, Liwei, et al. "Using portable air purifiers to reduce airborne transmission of infectious respiratory viruses-a computational fluid dynamics study." medRxiv (2021).
